PROFESSIONAL SUMMARY

Full-stack developer (NestJS, React, Django) and 2026 CS graduate with paid experience on 3 development teams since Nov 2025. Builds with Claude Code and Codex and coaches interns on reviewing AI-written code.

EXPERIENCE

Software Engineer, MetaWatt *Jun 2026 – Present*

AI-native startup | EduVerse e-learning platform | TypeScript, React, NestJS, Prisma, PostgreSQL/Supabase

- Built authentication, multi-school tenant isolation, real-time notifications, certificate issuance, and file uploads across the React frontend and a Node.js/NestJS REST API (70 merged PRs).
- Secured the API with global auth guards, tenant-scoped data access, and strict JWT verification, with HTTP regression tests for each rejection case.
- Prevented conflicting updates when users act at the same time (invite redemption, certificate revocation, survey submission) using atomic SQL writes, and added a CI check that runs new migrations against existing data.
- Coached OJT interns on coding standards and AI-assisted workflows and reviewed their PRs, catching issues such as a form update that would cascade-delete existing fields.

Full Stack Developer, Esca (Part-time Contract) *Mar 2026 – Aug 2026*

Team of 8 developers | React Native/Expo mobile app + Vite/React web app, shared Supabase backend

- Eliminated 3 session race conditions by consolidating auth state into a layout-level guard and reusable React hooks.
- Built typed Supabase data-access services (buyers, vehicles, logistics providers) with validation and Jest/Vitest tests.
- Built QR scanning, telemetry views, and role-based dashboards for a government-funded agtech platform for farmers, coop admins, and packing houses (83 merged PRs).

Full Stack Developer, Panpacific University (Part-time Contract) *Nov 2025 – Jun 2026*

Team of 8 developers | Django + Wagtail CMS, PostgreSQL, AWS S3, Docker

- Built 15+ custom Wagtail page models and StreamField blocks plus 20+ responsive Tailwind sections, so non-technical staff can create and publish Academics, Admissions, and Sustainability pages without a developer (79 merged PRs).

PROJECTS

TB Treatment Outcome Prediction: CS Thesis *May 2026*

Temporal Model Developer | Python, Bi-LSTM, SHAP | DOH-CAR TB-DOTS records, 2015–2025

- Built the Hybrid Bi-LSTM temporal model, the team's best model on balanced accuracy and the only one that missed no treatment failures.

VoltGuard: 3rd Place, Meralco IDOL Hackathon *Nov 2025*

Full Stack Developer & UI/UX Designer | React 19, FastAPI, PostgreSQL, Redis, Socket.IO | github.com/msmeralco/VoltGuard

- Designed and built the mobile-first React frontend for an AI energy-waste monitor (dashboard, analytics, chatbot views).
- Built the streak gamification system end to end (FastAPI endpoints, PostgreSQL schema, React UI) and real-time Socket.IO alerts for high-usage and idle-device detections.

EDUCATION

Saint Louis University, Baguio City, Benguet *Jul 2026*

Bachelor of Science in Computer Science | Dean's Lister, 7 of 8 semesters

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML/CSS

Frameworks & Libraries: React, React Native, Node.js, NestJS, Prisma, Django, FastAPI, Wagtail CMS, Tailwind CSS

Databases: PostgreSQL, Supabase, Redis

AI-Assisted Development: Claude Code, Codex, agentic coding workflows

Machine Learning: Bi-LSTM time-series modeling, SHAP explainability

Tools & Practices: Git, GitHub Actions, Docker, AWS S3, Jest, Vitest, Postman, Jira, REST APIs, CI/CD, Agile/Scrum
