PROFESSIONAL SUMMARY

Full-stack developer (React/React Native, Django, Supabase/PostgreSQL) shipping production features for government and university platforms, from a government-funded agtech mobile app to a self-service university CMS.

Computer Science graduate, Saint Louis University (SLU). 3rd Place, 2025 Meralco IDOL Hackathon.

EXPERIENCE

Full Stack Developer, Esca (Contract)

Mar 2026 – Present

Team of 8 developers · React Native/Expo mobile app + Vite/React web app, shared Supabase backend

- Refactored AuthContext to eliminate 3 session-persistence race conditions and closed an IDOR-style userId-spoofing vulnerability with a layout-level auth guard, authoring reusable React hooks along the way.
- Shipped 83 PRs (~5/week) across a React Native/Expo app and React 19 web SPA for a government-funded agtech platform used by farmers, coop admins, and packing houses.
- Built 7+ typed Supabase data-access services (buyers, vehicles, logistics providers, farmlands, purchase orders, market-price aggregation) with validation and Jest/Vitest test suites, enforcing a 60% coverage threshold across services, hooks, and contexts.
- Shipped 20+ production components (QR scanning, inflow/outflow tracking, telemetry views) across 3 role-based dashboards.
- Led a cleanup pass removing 1,239 lines of dead code and standardizing theming across 41 files to reduce visual inconsistency and maintenance overhead.

Full Stack Developer, Panpacific University (Contract)

Nov 2025 – Present

Team of 8 developers · Django 5.2 + Wagtail 7.2 CMS, PostgreSQL, Redis, AWS S3, Docker

- Built 15+ custom Wagtail page models and StreamField blocks powering a self-service CMS across Academics, Admissions, and Sustainability, enabling non-technical staff to publish content without engineering support (79 PRs over 7 months).
- Shipped 20+ Tailwind CSS 4 frontend components (hero portals, FAQ search, Campus Life, Student Exchange cards, mobile-responsive sidebars) and implemented client-side program search filtering.

ACADEMIC PROJECTS

Backend Developer & Database Designer, Cache Game

Jan – Mar 2025

Java/JavaFX, Go, Node.js, MongoDB, Docker Compose

- Co-developed the Node.js REST API for a 6-service microservices architecture (Java/JavaFX client, 2 Go services for real-time WebSocket gameplay and matchmaking, MongoDB, Nginx), designing the MongoDB data-access layer for auth, game history, and score updates via upsert patterns.

UI/UX Designer & Full Stack Developer, Exit-Interview Platform

Aug – Sep 2024

Node.js, PHP/Apache, MariaDB, Nginx, Docker

- Delivered a dual-backend exit-interview platform (Node.js + PHP/Apache behind an Nginx reverse proxy, MariaDB, Docker Compose), shortlisted for university-wide adoption; led a refactor consolidating ~9,800 lines of legacy code across 88 files.

EDUCATION

Saint Louis University, Baguio City, Benguet

Jul 2026

Bachelor of Science in Computer Science · Dean's Lister, 7 of 8 semesters

SKILLS

Languages: Java, JavaScript, TypeScript, Python, Go, PHP

Frameworks & Libraries: React, React Native, Node.js, Django, Wagtail CMS, Tailwind CSS, FastAPI

Databases: PostgreSQL, MySQL, MariaDB, MongoDB, Supabase, Redis

Tools: Git, Docker, Nginx, AWS S3, Jest, Vitest, Figma, Jira · Agile/Scrum, TDD, CI/CD, Postman

CERTIFICATIONS & AWARDS

- Certified Lean Six Sigma Yellow Belt (CLSSYB-032225-54) · Project Management Fundamentals Certified (PMFC-032325-18)
- 3rd Place, 2025 Meralco IDOL Hackathon (Nov 2025)
